

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A method for editing an electronic document containing drawings, comprising the steps of:

- dividing said document into a plurality of regions, each region having a reference axis, and wherein positions of said drawings are identified with respect to said axes;
- receiving a request to modify a line size in a text portion of said document; and
- rescaling said drawings in accordance with said axes and proportional to the modification in line size of the text portion.

Claim 2 (original): The method of claim 1, further comprising the steps of:

- determining if said rescaled drawings overlap with one another;
- if said rescaled drawings are determined to overlap, repositioning one or more of said drawings such that said overlap no longer exists.

Claim 3 (original): The method of claim 2, further comprising the steps of:

- determining if a size of said repositioned drawings exceeds a predetermined limit; and
- if said size is determined to exceed said limit, rescaling the repositioned drawings such that said size no longer exceeds said limit.

Claim 4 (original): The method of claim 3, wherein said predetermined limit is a page width.

Claim 5 (original): The method of claim 3, wherein said predetermined limit is a distance between a right margin and a left margin of said document.

Claim 6 (original): The method of claim 1, wherein said step of rescaling said drawings further comprises the step of rescaling offset distances between reference points of said drawings and said axes.

Claim 7 (original): The method of claim 1, wherein said plurality of regions includes a left margin region, a body region, and a right margin region.

Claim 8 (original): The method of claim 1, wherein said reference axes are horizontally-located in the center of said regions.

Claim 9 (original): The method of claim 1, wherein said drawings each include an anchor point.

Claim 10 (original): The method of claim 9, wherein said anchor point is a center of said drawing.

Claim 11 (original): The method of claim 9, wherein said anchor point is a corner of said drawing.

Claim 12 (original): A computer-readable medium, having computer-executable instructions for performing the steps recited in claim 1.

Claim 13 (previously presented): A method for editing an electronic document containing text and drawings, comprising the steps of:

- receiving a request to modify a line height of said text;
- rescaling said text in proportion to said modified line height;
- rescaling said drawings responsive to said request to modify said line height;
- determining whether said rescaled drawings overlap one another; and
- if said rescaled drawings are determined to overlap one another, repositioning one or more of said drawings to avoid said overlap.

Claim 14 (canceled)

Claim 15 (original): A computer-readable medium, having computer-executable instructions for performing the steps recited in claim 13.

Claim 16 (currently amended): A method for editing an electronic document containing drawings, comprising the steps of:

- dividing said electronic document into a plurality of adjacent regions;
- assigning a reference axis for each of said regions;
- identifying one or more drawings in said document, and assigning each of said drawings to one of said regions;
- for each of said drawings, determining a distance to one of said reference axes; and
- responsive to a change in a line size of a text portion of said document, rescaling each of said drawings proportional to said change in said line size of the text portion, and in accordance with said distance to said one of said reference axes.

Claim 17 (currently amended): The method of claim 16, further comprising the steps of:

- responsive to said change in said line size of the text portion of said document, repositioning one or more of said drawings, such that a portion of said drawing is displayed on a first page of said document, and a portion of said drawing is displayed on a second page of said document.

Claim 18 (original): The method of claim 17, further comprising the step of displaying one or more indicators on said first page indicating the existence of said portion of one or more of said drawings displayed on said second page.

Claim 19 (original): A computer-readable medium, having computer-executable instructions for performing the steps recited in claim 16.

Claim 20 (original): A method for editing an electronic document containing drawings, comprising the steps of:

- determining a bounding box for a new drawing to be added to said document;
- identifying an anchor point for said new drawing;
- dividing said document into a plurality of adjacent regions, each region having a reference axis; and
- storing an offset value representing a distance between said new drawing and one of said reference axes.

Claim 21 (original): The method of claim 20, wherein said bounding box encompasses an existing drawing and a newly-added drawing.

Claim 22 (original): A computer-readable medium, having computer-executable instructions for performing the steps recited in claim 20.

Claim 23 (currently amended): A portable computing device, comprising:

- a display screen, wherein at least a portion of an electronic document is displayed on said display screen, said document containing one or more drawings; and

- a computer-readable medium, having computer-executable instructions for performing the following steps:

- dividing an electronic document into a plurality of regions, each region having a reference axis, and wherein positions of said one or more drawings are identified with respect to said axes;

- receiving a request to modify a line size of a text portion of said electronic document; and

- rescaling said one or more drawings in accordance with said axes and proportional to the modification in line size of the text portion.

Claim 24 (currently amended): The device of claim 23, wherein said computer-readable medium further includes computer-readable instructions for repositioning said rescaled one or more drawings in proportion to said modification in line size of the text portion.

Claim 25 (currently amended): The device of claim 23, wherein said computer-readable medium further includes computer-readable instructions for, responsive to said change in said line size of the text portion of said document, repositioning one or more of said drawings, such that a portion of said drawing is displayed on a first page of said document, and a portion of said drawing is displayed on a second page of said document.

Claim 26 (original): The device of claim 23, wherein said computer-readable medium further includes computer-readable instructions for determining if said rescaled drawings overlap with one another; and if said rescaled drawings are determined to overlap, repositioning one or more of said drawings such that said overlap no longer exists.

Claim 27 (original): The device of claim 23, wherein said computer-readable medium further includes computer-readable instructions for determining whether a bounding box for a new drawing overlaps a bounding box of an existing drawing, and if said overlap exists, defining a new bounding box containing both said new drawing and said existing drawing.

Claim 28 (previously presented): The method of claim 13, wherein the request to modify the line height is a request to increase the line height.
